Springer International

Pflügers Archiv · European Journal of Physiology

Founded in 1868 as „Pflügers Archiv für die gesamte Physiologie des Menschen und der Tiere" by *E. F. W. Pflüger*. Edited by *M. Verworn, E. Abderhalden, A. Bethe, R. Höber, A. v. Muralt, H. Rein* et al.

Published: Vol. 1—29 (1876) Bonn, Cohen und Sohn; Vol. 30—92 (1901) Bonn, E. Strauß; Vol. 93—170 (1917) Bonn, M. Hager; since Vol. 171 (1918) Berlin, Springer.

Since 1920 Pflügers Archiv has included: „Archiv für Physiologie" (Archiv für Anatomie und Physiologie, Physiologische Abteilung). Founded and edited by Johannes Müller, E. du Bois-Reymond, W. v. Waldeyer-Hartz et al. 1877—1914. Leipzig, Veit und Co., since 1915, Berlin, Vereinigung Wissenschaftlicher Verleger, afterwards Walter de Gruyter.

Alle Rechte, einschließlich das der Übersetzung in fremde Sprachen und das der fotomechanischen Wiedergabe oder einer sonstigen Vervielfältigung, auch in Mikroform, vorbehalten. Jedoch wird gewerblichen Unternehmen für den innerbetrieblichen Gebrauch nach Maßgabe des zwischen dem Börsenverein des Deutschen Buchhandels e.V. und dem Bundesverband der Deutschen Industrie abgeschlossenen Rahmenabkommens die Anfertigung einer fotomechanischen Vervielfältigung gestattet. Wenn für diese Zeitschrift kein Pauschalabkommen mit dem Verlag vereinbart worden ist, ist eine Wertmarke im Betrage von DM 0,40 pro Seite zu verwenden. *Der Verlag läßt diese Beträge den Autorenverbänden zufließen.*

Die Wiedergabe von Gebrauchsnamen, Handelsnamen, Warenbezeichnungen usw. in dieser Zeitschrift berechtigt auch ohne besondere Kennzeichnung nicht zu der Annahme, daß solche Namen im Sinne der Warenzeichen- und Markenschutz-Gesetzgebung als frei zu betrachten wären und daher von jedermann benutzt werden dürften.

The exclusive copyright for all languages and countries, including the right for photomechanical and any other reproductions, also in microform, is transferred to the publisher.

The use of registered names, trademarks, etc. in this publication does not imply, even in the absence of a specific statement, that such names are exempt from the relevant protective laws and regulations and therefore free for general use.

Indexed in Current Contents

Subject Index for Volume 369

A

Acetylcholine 207—211
Acetylcholine 289—290
Adaptation to cold 17—20
Adenosine receptor, cell surface 251—257
Adenosine, release of from isolated guinea pig heart 1—6
Adipose tissue 49—54
Age, and experimental hypertension 177—182
α-adrenergic receptors 207—211
Amylase secretion in mouse parotid 207—211
Anoxia, effect on nitrogen metabolism 167—175
Antidromic potentials 65—73
Aspartate, inhibition of synaptic transmission 7—16
ATPase 269—271
ATPase activity, myosin 85—89
ATPase, bile acids 203—206
ATPase, HCO_3^--ATPase in rabbit red blood cells 119—124
ATPase, rat colon 203—206
Atrial muscle 285—287
Atrial muscle cells 251—257

B

β-adrenergic receptors 207—211
β-hydroxybutyrate dehydrogenase 167—175
Bilateral dorsal root potential 187—192
Bile acids 203—206
Blood flow distribution in spleen 193—201
Blood flow, fast muscles 141—149
Blood flow measurement 183—186
Body fluid, volume control 245—250
Brain, delta-EEG enhancing nonapeptide 99—109
Brattleboro rats, experimental hypertension 177—182

C

Ca, frog skeletal muscle 259—267
c-AMP, isolated heart 251—257
Capillaries, visualization in skeletal muscle 269—271
Carbodiimide 251—257
Carbonic anhydrase 251—257
Cardiac muscle 285—287
Carotid body, O_2 consumption 135—140
Carotid sinus nerve 65—73
Cerebral blood flow 183—186
Cervical spinal cord cooling 17—20
C-fibres 65—73
Chemical stimulation 289—290
Citellus lateralis 55—59
Clearance, ^{14}C-inulin 281—283
Cold adaptation 17—20
Colon, bile acids 203—206
Compliance, interstitial 245—250
Contraction hyperaemia 151—159
Cooling, effect on rabbit Cornea 33—37
Cornea, epithelial intracellular potential 33—37
Cornea epithelial potential and metabolic inhibitors 33—37
Cornea, rabbit, K and Li ions 33—37
Coronary flow 1—6
Coronary myocytes 251—257
Cortex, local blood flow 183—186
Cutaneous nocireceptors 27—32

D

D 600, release of Ca from sarcolemmal sites 259—267
Diabetes insipidus, and hypertension 177—182
Diastolic wall stress 213—221
Desensitization 7—16
Determination of gas fractions 91—94
Development, monosaccharide uptake into skeletal muscle 61—64
Development, myosin in skeletal muscle 85—89
Dorsal root potential 187—192
Double sucrose gap 285—287

E

EEG, naturally occurring nonapeptide 99—109
Elastic modulus, hypertrophied left ventricle 213—221
Electrical stimulation 289—290
Electrodermal reflexes, in cat's paw 27—32
Electrolytes in small biological fluid samples 95—98
Electron microprobe analysis 95—98
End-plate potential 123—133
Energy dispersive in X-ray microanalysis 95—98
Epinephrine 21—25
Exercise, glucose homeostasis 21—25
Extracellular fluid volume, interstitial pressure 245—250
Excitation-contraction coupling, cardiac muscle 285—287
Excitatory postsynaptic current 7—16
Excitatory synaptic transmission 7—16

F

Facilitation 259—267
Fast muscles, blood flow 141—149
Fast muscles, chronic stimulation 141—149
Fast muscles, fatigue 141—149
Fast muscles, metabolism 141—149
Fat tissue 49—54
Fatigue, fast muscles 141—149
Fatty acids, muscle metabolism 141—149
FITC-Dextrans, tubular passage 273—279
Fluorescence microphotometry 273—279
Functional hyperaemia, skeletal muscle 151—159

G

Gas analysis 91—94
Gas chromatography 91—94
Glomerular filtration rate 281—283
Glomerular filtration rate, feedback control 39—48
Glomerular filtration rate, rat kidney 39—48
Glomerular permeability 273—279
Glucagon, and glucose homeostasis after prolonged exercise 21—25
Gluconeogenesis 21—25
Glucose homeostasis 21—25
Glutamate dose-response curve 7—16
Glycogen 21—25
Glyzerol release 49—54
Goldblatt II Hypertension 213- -221

H

Haemoglobin human 223—231
Hair follicle receptors 27—32
Heat production 55—59
Hepatectomy, partial, and renal function 233—238
Hepatic nitrogen metabolism 167—175
Hiberation 55—59
Hüfner's factor 223—231
Hydronephrosis 177—182
Hydrogen clearance method (blood flow) 183—186
Hyperemia reactive 1—6
Hypertension, Goldblatt 213—221
Hypertension, in diabets insipidus rats 177—182
Hypothalamic temperature 55—59
Hypothalamus, pre-optic anterior 55—59
Hypoxanthine, release of from isolated guinea pig heart 1—6
Hypoxemia 49—54
Hypoxia, effect on adenine release from isolated guinea pig heart 1—6

I

Ileum, isolated 289—290
Ileum, water transport 75—78
Inorganic phosphate, muscle hyperaemia 151—159
Inosine, release of from isolated guinea pig heart 1—6
Insulin 21—25
Insulin, stimulation of methylglucose uptake into skeletal muscle 61—64
Interstitial pressure 245—250
Interstitial space 245—250
Intestinal transport, water absorption and swelling 75—78
Intrasplenic vascular pathways 193—201

Inulin-^{14}C, clearance 281—283
Iontophoresis, pH 239—244
3-Isobutyl-1-methylxanthine, feedback control of GFR 39—48
Isolated heart, guinea pig 251—257
Isometric contraction, fast muscles 141—149

J

Jejunum, water transport 75—78

K

Kidney, clearances 281—283
Kidney, concentrating ability post hepatectomy 233—238
Kidney, dilution of urine 233—238
Kidney, free water reabsorption 233—238
Kidney, glucose reabsorption in unilaterally splanchnicotomized dogs 79—84
Kidney, glucose threshold in unilaterally splanchnicotomized dogs 79—84
Kidney, local flow velocities in PCT 273—279
Kidney, Na excretion in unilaterally splanchnicotomized dogs 79—84
Kidney, phosphate reabsorption 111—118

L

Left ventricle hypertrophy 213—221
L-glutamate 7—16
Lithium, effect on rabbit cornea 33—37
Liver, isolated perfused 167—175
Local blood flow 183—186
Loop of Henle, reabsorption rate 39—48

M

Mediator-receptor interaction 239—244
Membrane, red blood cell and HCO_3^--ATPase 119—124
Metabolic inhibitors, effect on rabbit cornea 33—37
Metabolic heat production 55—59
Methylxanthines, feedback control of GFR 39—48
Microcirculation, intrasplenic 193—201
Microelectrodes 183—186
Micropuncture, renal phosphate reabsorption 111—118
Mitochondria, transfer of reducing equivalents 167—175
Monosaccharide uptake into skeletal muscle 61—64
Muscle blood flow 151—159
Muscle contraction 151—159
Muscles, fast 141—149
Muscles, fast and slow 85—89
Muscle, mechanical threshold 259—267
Muscle Stretch 123—133
Myocardial blood flow 251—257
Myosin ATPase activity 85—89
Myosin light chains 85—89

N

Nephrectomy, unilateral 177—182
Nerve, afferents 65—73
Neuromuscular transmission 123—133
Neuromuscular transmission 239—244
Neurons, activity in cat superior colliculus 161—165
Nicotinamide nucleotides, isolated perfused liver 167—175
Nitrogen metabolism, isolated perfused rat liver 167—175
Norepinephrine 21—25

O

Oxidase 135—140
Oxygen, binding capacity 223—231
Oxygen consumption, carotid body 135—140
Oxygen content, manometric, polarographic and chemical determination 223—231
Oxygen pressure, decrease in carotid body after perfusion stop 135—140
Oxygen reception 135—140

P

Pacinian corpuscles, cat paw 27—32
Parotid gland 207—211
pH, effects on conductance change in neuromuscular junction 239—244
Phosphate reabsorption, in different nephron segments 111—118
Phosphate release, skeletal muscle 151—159
Polyfructosan clearance 281—283
Potassium, effect on rabbit cornea 33—37
Potassium release, stimulation induced in parotid 207—211
Preoptic cooling 17—20
Presynaptic inhibition 187—192
Primary afferent fibres 65—73
Proteolysis, isolated perfused rat liver 167—175

R

Rat kidney, tubuloglomerular feedback 39—48
Red blood cells, HCO_3^--ATPase 119—124
Redox state, cellular, isolated liver 167—175
Reflexes 49—54
Renal denervation 79—84
Renal dye test 273—279
Resistance, vascular 49—54

S

Sacral cord 187—192
Sarcomere length 213—221
Salt adaptation 177—182
Scholander method, accuracy of gas fractions 91—94
Skeletal muscle, developmental changes 61—64
Skeletal muscle, differentiation of myosin during development 85—89
Skeletal muscle, facilitation of excitation-contraction coupling 259—267
Skeletal muscle, fiber typification 269—271
Skeletal muscle, phosphate and functional hyperaemia 151—159
Skin, natural stimulation 27—32
Sleep inducing peptide 99—109
Slow eye movement 161—165
Small intestine, water absorption and swelling 75—78
Smooth muscle, ileum 289—290
Spinal cord 187—192
Spinal cord cooling 17—20
Splenic blood flow 193—201
Splenomegaly 193—201
Stimulus frequency, effect on end-plate potential amplitude 123—133
Stretch, effect on neuromuscular transmission 123—133
Subcutaneous adipose tissue 49—54
Sucrose gap 285—287
Superior colliculus, cat, activity of neurons 161—165
Superfusion apparatus 289—290
Synaptic transmission 7—16
Systolic wall stress 213—221

T

Tension 285—287
Theophylline, feedback control of GFR 39—48
Thermodes 55—59
Thermoregulation 17—20
Thermoregulation 55—59
Thyroparathyroidectomy 111—118
Tractus solitarius, nucleus of 65—73
Transmembrane voltage control 285—287
Tubular dye passage 273—279
Tubular urine flow 273—279
Tubuloglomerular feedback 39—48

U

Unit activity 183—186
Ureteral pressure elevation 281—283

V

Vascular permeability 251—257
Vascular resistance 49—54
Vasoconstriction 49—54
Voltage clamp 7—16
Voltage clamp, cardiac muscle 285—287
Volume depletion, interstitial fluid pressure 245—250

W

Water transport, small intestine 75—78
Working capacity, hypertrophied left ventricle 213—221

X

X-ray analysis 95—98

Subject Index for Volume 370

A

Acetylcholine 295—297
Acid-base status 283—286
Acute renal failure 155—163
— ischaemic 155—163
— toxic 155—163
Adaptation 259—267
ADH release, preoptic-anterior hypothalamus heating 51—57
Adrenergic alpha-receptor blocking agents 19—23
Adrenoreceptors 131—137
Age differences 77—80
Alpha adrenergic receptor stimulation 241—246
α-Adrenergic stimulation 37—44
Alpha receptor blockade 247—251
Alpha receptor blocking agents 19—23
Altitude 227—232
Amplifier, automatically balancing isolation 93—97
Amylase secretion 173—177
Amylase secretion 179—183
Anal Spincter, internal 233— 239
Antidiuresis 51—57
Antidiuretic activity of plasma, heating of hypothalamus 51—57
Anti-NaK-ATPase 269—276
Aortic flow 139—144
Apical membrane potential 145—153
Arterial hypoxemia 71—75
Arteriovenous anastomoses 71—75
Atelectasis 71—75
ATPase and cation transport 269—276
ATPase, Na^+-K^+ 295—297
ATPase, tension dependent 9—18
ATP utilization, tension dependent 9—18
Atrio-ventricular block 131—137
Autocovariance function 221—225
Autofluorescence 77—80
Autonomic reflexes 131—137
Autoregulation, renal blood flow 81—85

B

Baroreflex, resetting by arterial hypoxia 1—7
Basal-lateral membranes 121—126
Basal lateral membranes, renal 269—276
Beta adrenergic receptor stimulation 247—251
Bicarbonate 291—294
Bicarbonate reabsorption 121—126
Bicarbonate transfer placenta 165—171
Blood density 25—29
Blood flow, regional myocardial 253—258
Blood hyperosmolality 127—130
Blood volume 25—29
Bone 77—80
Bradykinin 127—130
Brain cortex 201—209
Brainstem, electrical stimulation 19—23
Brainstem, thermogenic response 19—23
Brightness discrimination 259—267
Brush border, isolated 121—126

C

Ca^{2+} dependency 179—183
Caerulein 173—177
Caerulein 179—183
Calcium concentration, extracellular 179—183
Calcium ion uptake 37—44
Capillary density 227—232
Carbonic anhydrase activity 121—126
Cardiac innervation, development 99—101
Cardiac lymph in dogs 31—36
Cardiac mechanical performance 31—36
Cardiac rhythmicity 299—302
Cardiac output 25—29
Cardiac output 139—144
Cardiac output 241—246
Cardiac output 247—251
Cardiac pacing 31—36
Cardiac sympathic nerves 1—7
Catecholamines, intra-coronary administration 31—36
Cation selectivity, node of Ranvier 185—194
Cation transport, renal 269—276
Central cortical rhythms 221—225
Cerebral grey matter 201—209
Cesium 185—194
Chemoreceptors 1—7
Chloride selective electrode 87—91
Cholinergic stimulation 37—44
Circulation, gas embolism 67—70
Collagen 77—80
Cooling of skin 111—114
Coronary blood flow 31—36
Coronary blood flow 131—137
Coronary perfusion pressure 31—36
Coronary resistance 131—137
CO_2-transfer 121—126
Cryomicrophotometric oximetry 253—258
Current clamp 87—91

D

Dark adaptation 195—199
D.C. Potential 93—97
Density of flowing blood, continuous measurement 25—29
Development, postnatal 99—101
Diaphragm 295—297
Digestive motility 233—239
DOCA 59—66

E

ECG 221—225
EEG 221—225
End plate 295—297
Enzymes membrane-bound 121—126
Epinephrine 247—251
Epithelial cell cultures 269—276
Erythrocytes, Lithium transport 211—219
Evoked potentials 195—199
Expansion of extracellular fluid volume 115—119
Extracellular fluid volume (ECFV) 115—119
Eye, adaptation to different levels of constant luminances 259—267

F

Femur 77—80
Filtration pressure, renal 155—163
Fluid secretion 179—183
Fluorescence, oxytetracycline induced 77—80
Frog skin 145—153

G

Gas embolism, pulmonary 67—70
Gas embolism, pulmonary 71—75
Gating mechanism node of ranvier 185—194
Glomerular filtration rate 155—163
Glomerular filtration rate, autoregulation 81—85
Glucagon, perfused rat liver 45—49
Glucagon stimulation 45—49
Glucose uptake, isolated heart 103—105
Gluconeogenesis 45—49

H

Heart metabolism 103—105
Heart rhythm 221—225
Heat acclimatization 283—286
Hemodynamics, cardiac 31—36
Hemoglobin, intracapillary O_2 saturation 253—258
Hepatic gluconeogenesis 45—49
Hibernation 107—109
High temperatures 287—289
Hindlimb 299—302
Hindlimbreflexes 277—282
Human sensory nerve fibers 111—114
Hydrogen secretion 121—126
Hyperosmolality, blood 127—130
Hyperoxia 71—75
Hyperthermia 283—286
Hyperthermia 287—289
Hypertonic solutions 127—130
Hypothalamic alpha-adrenergic mechanism 19—23
Hypothalamus and renal function 51—57
Hypoxia 227—232
Hypoxia 299—302
Hypoxia and hypercapnia, transient 201—209

I

Impedance measurement 87—91
Indicator dilution technique 139—144
Indocyanine green 139—144
Inorganic Phosphate, reabsorptive capacity 115—119
Inotropic response, rat atria 99—101
Intensity of OTC fluorescence 77—80
Intra-mural plexus 233—239
Isolated atria (rat) 99—101
Isolated rat heart 103—105

Isolated salivary gland cells 37—44
Isolation amplifier 93—97
Isometric tension 9—18
Isoprenaline 127—130
Isoproterenol 131—137
Isoproterenol 247—251

K

Kidney 155—119
Kidney, NaK-ATPase 269—276

L

Lactate, aerobic production in carotid artery 9—18
Lactate release, isolated heart 103—105
Lactate transfer, placenta 165—171
L-alanine, glucose production in rat liver 45—49
Langendorff technique 103—105
Lanthanum 145—153
Left atrial pressure, effect on renal Na excretion 59—66
Left ventricle 253—258
Left ventricular peak systolic pressure 31—36
Lithium transport, red cell membrane 211—219
Liver perfused 45—49
Local Po_2 201—209
Luminance difference threshold 259—267
Lymph, cardiac 31—36

M

Manometry, digestive 233—239
Maternal-fetal exchange 165—171
Mechanical oscillator technique 25—29
Metabolism, of porcine carotid artery 9—18
Microelectrodes 111—114
Mitral stenosis, reversible 59—66
Muscle 299—302
Muscle, arterial muscle metabolism 9—18
Muscle energetics 9—18
Muscle, fiber composition 227—232
Myelinated axous 185—194
Myoglobin concentration 227—232

N

Na-dependent Li countertransport 211—219
Na^+-K^+-ATPase 295—297
Na^+-Li^+ exchange 211—219
Na^+-Na^+ exchange 211—219
Neon detection 67—70
N-ethylmaleimide 211—219
Neuromuscular junction 295—297
Neurotransmitter 37—44
Node of Ranvier 185—194
Noradrenaline 99—101
Noradrenergic central pathways 19—23
Norepinephrine 131—137
Norepinephrine 241—246

O

Oxygen consumption 253—258
O_2 deficiency 201—209
O_2 microsensor 201—209
Osmotic pressure 25—29
Oximetry 253—258
Oxygen balance, myocardial 131—137
Oxygen consumption, carotid artery 9—18
Oxygen extraction, subendocardial 253—258
Oxygen extraction, subepicardial 253—258
Oxytocin 145—153

P

Pancreas, acinar cell membrane potential 173—177
Pancreas, blood flow 127—130
Pancreatic fluid secretion 179—183
Papaverine 127—130
Parathyroid-ectomy 115—119
Parathyroid hormone 115—119
Parotic gland 37—44
Permeability, placental 165—171
Peroneal nerve, deep 277—282
pH electrode 93—97
Phentolamin 241—246
Phloretin 211—219
Phosphate 291—294
Phosphaturia, bicarbonate-induced 291—294
Phosphorus depletion 291—294
Pindolol 247—251
Placenta, bicarbonate transfer 165—171
Placenta, lactate transfer 165—171
Postganglionic vasoconstrictor neurones 299—302
Postural mechanisms 277—282
Po_2 regulation 201—209
Potassium conductance, Ranvier node 185—194
Potassium, resting potential 173—177
Potential measurement with Ag/AgCl coated class electrode 87—91
Power spectra 221—225
Preoptic neurones 107—109
Pressure, proximal intratubular 155—163
Pulmonary artery flow 139—144
Pulmonary gas embolism 67—70
Pulmonary gas embolism 71—75

R

Ranvier node, K-conductance 185—194
Recto-anal inhibitory reflex 233—239
Red cell membrane, Li-transport 211—219
Renal blood flow, autoregulation 81—85
Renal function during preoptic-anterior hypothalamic heating 51—57
Renal plasma membranes 269—276
Renal sympathic nerves 1—7
Renal sympathetic nerve 221—225
Renal tubular cells 121—126
Resetting of baroreflex 1—7
Respiration, gas embolism 67—70
Respiratory alkalosis 283—286
Respiratory alkalosis 287—289
Respiratory rhythmicity 299—302
Resting potential 173—177
Rhythmicities, cardiac and respiratory 299—302

S

Salivary gland cells, Ca uptake 37—44
Secretin 127—130
Sensory nerve fibers 111—114
Serum electrolytes 287—289
Serum enzymes 287—289
Sex differences 77—80
Short-circuit current, frog skins 145—153
Skeletal muscle, rat 227—232
Skin 299—302
Skin nerves, warm units 111—114
Skin temperature 107—109
Sodium balance 59—66
Sodium excretion 115—119
Sodium permeability 145—153
Spinal monosynaptic reflexes 277—282
Submandibular gland 37—44
Sulfonamide inhibition of carbonic anhydrase 121—126
Sympathetic nerve stimulation 31—36
Sympathetic nervous system, development 99—101
Sympathic activity, postganglionic 221—225

T

Temperature, high and low ambient 107—109
Temperature regulation 107—109
Thermogenesis, central control 19—23
Thermoregulation 51—57
Thermosensitive neurones 107—109
Thermosensitivity, preoptic neurones 107—109
Thyroparathyroidectomized (TPTX) rats 291—294
Tissue perfusion, heterogeneity 253—258
Tonic neck positions 277—282
Tonic neck reflexes 277—282
Transmitter, non-quantal release 295—297
Tyramine 99—101

U

Umbilical circulation 165—171
Ureteral occlusion 155—163
Urine concentration, hypothalamus 51—57
Urine flow rate 155—163

V

Vagal afferents 1—7
Vagus nerve 127—130
Vasoconstrictor neurones 299—302
Venous bed, integrated systemic 241—246
Venous bed, integrated systemic 247—251
Venous blood volume 241—246
Venous blood volume 247—251
Venous system 241—246
Venous system 247—251
Vertebral prominens reflex 277—282
Ventilation-perfusion ratio 71—75
Viher-Test 139—144
Visual evoked responses 195—199
Visual system 195—199
Voltage clamp 87—91

W

Warm fiber responses 111—114

X

Xylometazolin 241—246

Advice to Authors

The illustrations that will appear in your contribution will be shown to best advantage if you follow the brief set of instructions below. Please read carefully. Thank you.

The Publisher

Preparation of Line Drawings

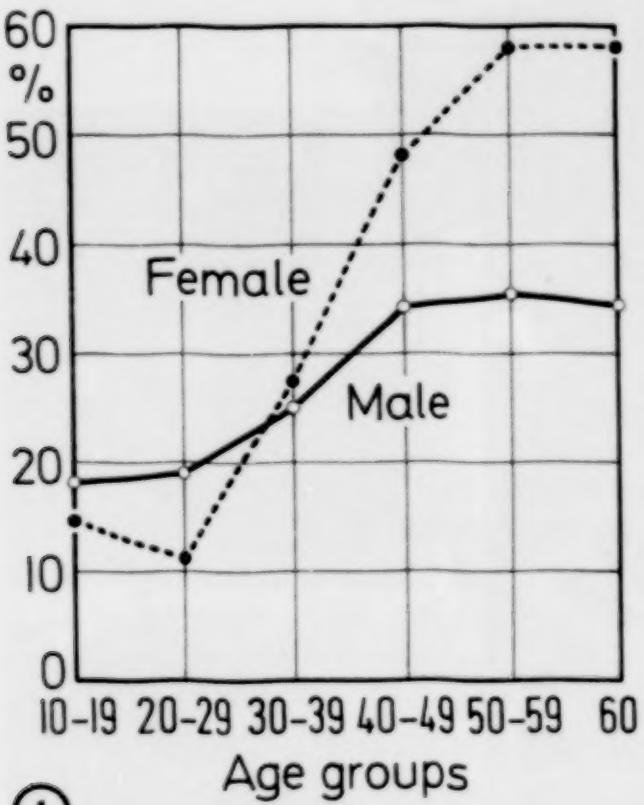
Illustration copy should be prepared to fit the format of the printed page (print area) so that 1 : 1 reproduction is possible. Where reduction is necessary, please state the desired scale.

Drawings are to be twice the final size and executed in indelible black ink.

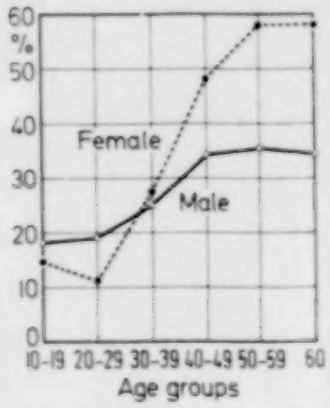
Important points to note: thickness of lines, size of inscriptions, size of measuring points, adequate spacing of shaded and dotted areas.

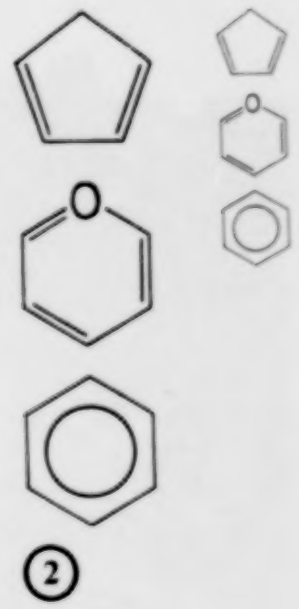
Words should be in upper and lower case characters, not CAPITALS.

The following are optimal sizes as they appear in the journal:
Capital letters and numbers: 2 mm
Lower-case letters: 1.6 mm.



①

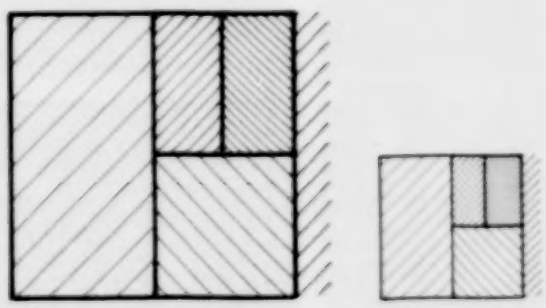




②

samples 1 to 5 show the original size and reduction × 50%

③



④

[(=-+x÷ !?:" ",)] (A) (B) (a) (b)

Selection of Illustration Material for Halftones (photographs, micrographs, X-rays, instrument traces etc.).

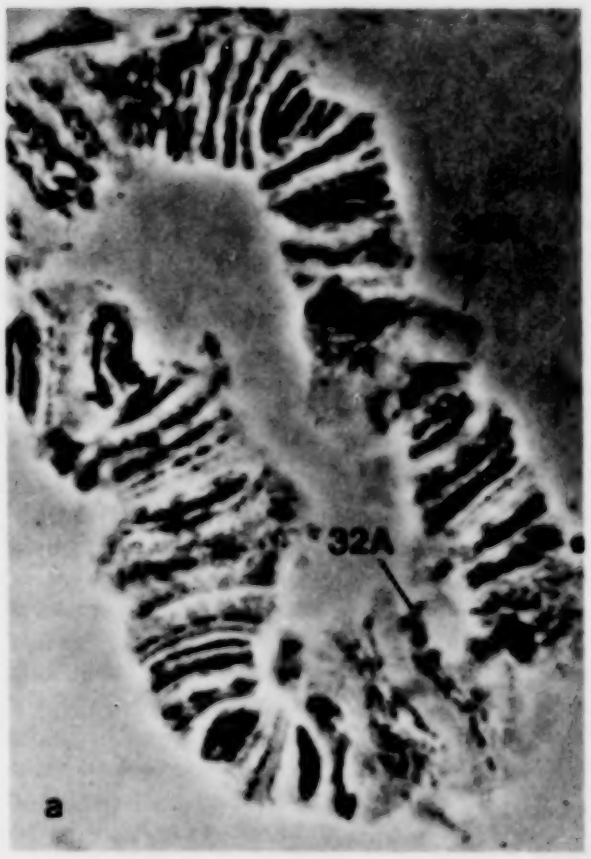
Photographs should be sharp, well-contrasted glossy prints of the original negative, trimmed at right angles. Halftone illustrations should be prepared to fit the format of the printed page (print area) so that 1 : 1 reproduction is possible. But if reduction is absolutely necessary, please state the desired scale.

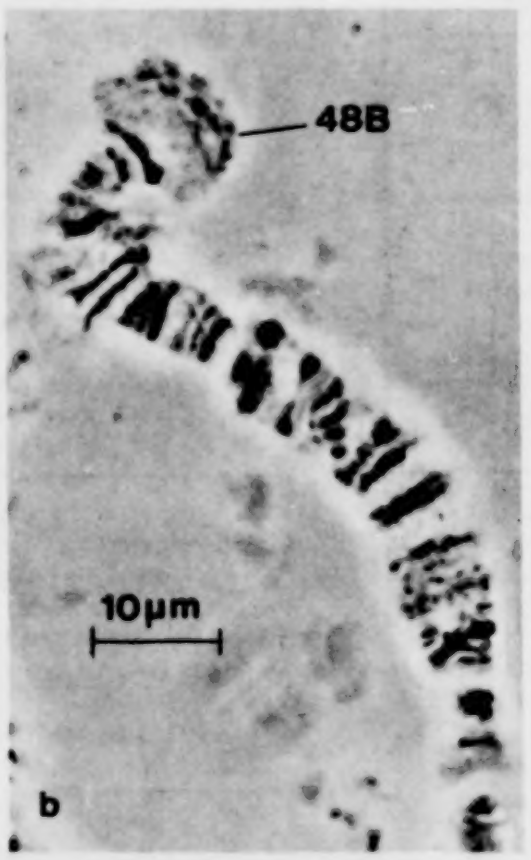
Mark or crop marginal portions which are not required (at right angles, please).

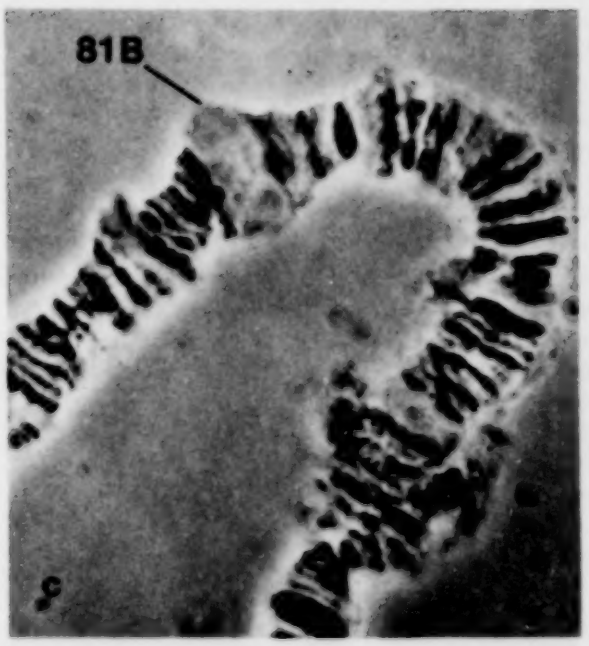
Please see that illustrations that are to appear together are mounted accordingly as plates and that they correspond. Also they should not exceed the print area of the page, including room for the legend.

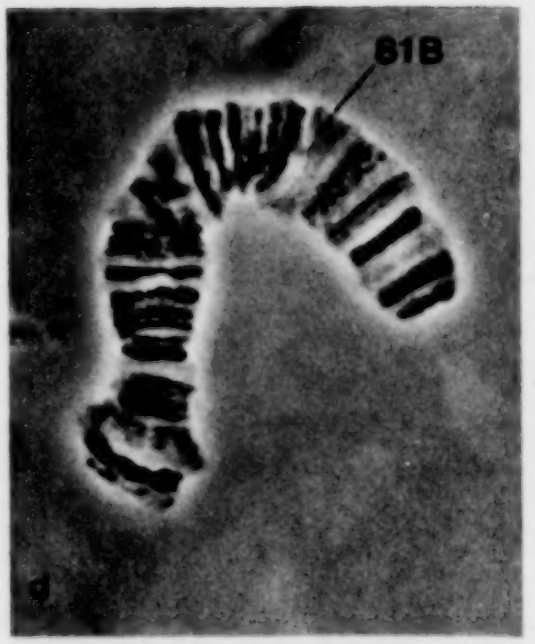
With X-rays, please indicate the significant parts on the back of the copy, or on an overlay.

Inscriptions, marks and scale lines should preferably be drawn neatly in black ink in an appropriate size on the face of the illustrations. Inscriptions should be about 3 mm high. Where Letraset is used, please handle it carefully and protect the photographs with an overlay.

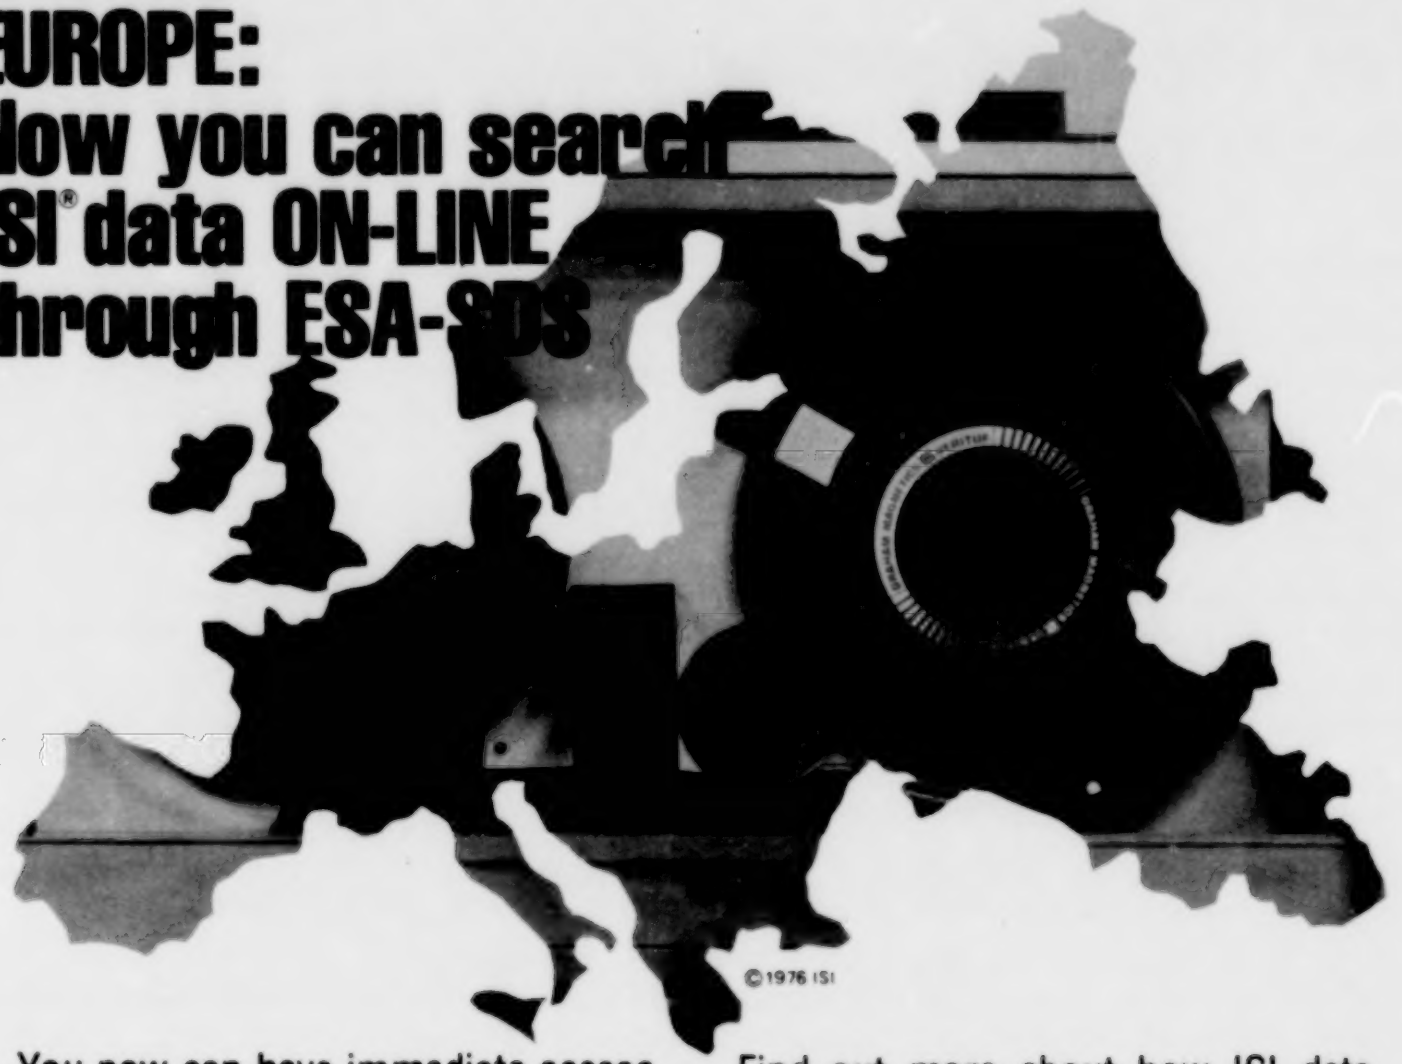








EUROPE:
Now you can search ISI® data ON-LINE through ESA-SDS



You now can have immediate access via the ESA-SDS computer to 1,300 of the world's most important physics, chemistry and engineering journals—the same journals covered in the *Science Citation Index®*, *CC®/Physical & Chemical Sciences* and *CC/Engineering, Technology & Applied Sciences*.

Whether you're interested in—

- current awareness
- selective dissemination of information
- retrospective searching as far back as 1972

—the ESA-SDS computer will search the ISI data, find the information you want and deliver it *fast*.

All you need for this quick, on-line searching is a teletype or video-display terminal. You dial a number and are linked to the ESA-SDS central computer in Frascati, Italy.

ESA-SDS may be accessed by direct line with Frascati or by dialing through the PTT network to London, Brussels, Paris, Copenhagen, Darmstadt, or Rome. You can also dial via PTT lines to TYMESHARE in Brussels, Paris, Lausanne, London, or The Hague.

Find out more about how ISI data and ESA-SDS can make your literature searches faster, easier and more effective than ever before.

Mail the coupon below. Or contact David Raitt at the Space Documentation Service, ESA-SDS, Via Galilei, 00044 Frascati (Roma), Italy. Tel.: (Rome) 94 22 401; Telex: 61637 ESRINROM. Do it today.
